BALLAST MOUNTING SYSTEM

The ballast system for attaching photovoltaic modules serves as a supporting structure for photovoltaic modules that are placed on the roofs of buildings. It allows you to install solar stations on flat roofs with ballast without anchoring and to compensate for the angle of the roof when necessary. Such a fastening system is affordable, easy to install and does not damage the main waterproofing carpet, which prevents leaks or deterioration of the roof over time.

Aluminum clamp
(Z-shaped)

Galvanized steel profile
(C-shaped
5x10x41x41x10x5)

Hardware (bolts, nuts,
washers)

Galvanized steel profile
(C-shaped
5x10x21x41x21x10x5)

Ballast (concrete curb)

Corner (optional
aluminum/galvanized
steel)
