INSTALLATION SYSTEM FOR PITCHED ROOFS

The versatility of the system allows you to install photovoltaic modules on sloping roofs by fixing them in the rafter structure. Technical solutions make it possible to maintain waterproofing protection. Recommended for use on roofs with an angle of inclination from 20° to 75° and the following types of roofs: metal tiles, bituminous tiles, slate and rolled coverings.

Aluminum clamp (T/Z-shaped)

Galvanized steel profile (C-shaped 5x10x41x41x41x10x5)

Hardware (bolts, nuts, washers)
